## ADAPTECONII - PROJECT 1

### ADAPTECONII RESEARCH FOCUS

Maartje's research focuses on fisheries, connecting socio-economic research of fisheries to biological studies of the ecosystem. She will study ecologically oriented theories of economy and other alternatives to the mainstream neoclassical economic thought that has proven to be damaging to our ecosystems and societies.

### EXPERIENCE

Maartje holds a master's degree in Environmental Science and a bachelor's degree in Biology and Fine arts. During her Biology and Environmental science degrees she mainly specialized in coastal ecosystems, since these are especially vulnerable for future changes. During her studies she acquired several tools for studying these ecosystems such as modeling, fieldwork and remote sensing. In the PhD research Maartje is building further upon these skills and acquiring more training in systems analysis and system dynamic modeling.

### KEYWORDS

- Marine ecology
- Fisheries dynamics
- Commons theory / privatization of commons
- Governance of fisheries
- Science theory
- System dynamics modelling
- Systems analysis

### SUPERVISORS

**HARALD SVERDRUP**  
PROFESSOR  
UNIVERSITY OF ICELAND

**PETER SCHLYTER**  
ASSOCIATE PROFESSOR  
STOCKHOLM UNIVERSITY
